TAPESTRY SEGMENTATION PROFILE

+ WHAT IS TAPESTRY SEGMENTATION?

Tapestry Segmentation is a market segmentation system that classifies US neighborhoods based on their socioeconomic and demographic compositions. Tapestry is a system for classifying consumers and constituents using all the variables that can distinguish consumer behavior, from household characteristics such as income and family type to personal traits like age, education, or employment and even housing choices.

Tapestry Segmentation classifies US neighborhoods into 67 distinct market segments. Neighborhoods with the most similar characteristics are grouped together, while neighborhoods with divergent characteristics are separated. Tapestry Segmentation combines the “who” of lifestyle demography with the “where” of local neighborhood geography to create a model of various lifestyle classifications, or segments, of actual neighborhoods with addresses—distinct behavioral market segments.

+ WHO SHOULD USE TAPESTRY SEGMENTATION?

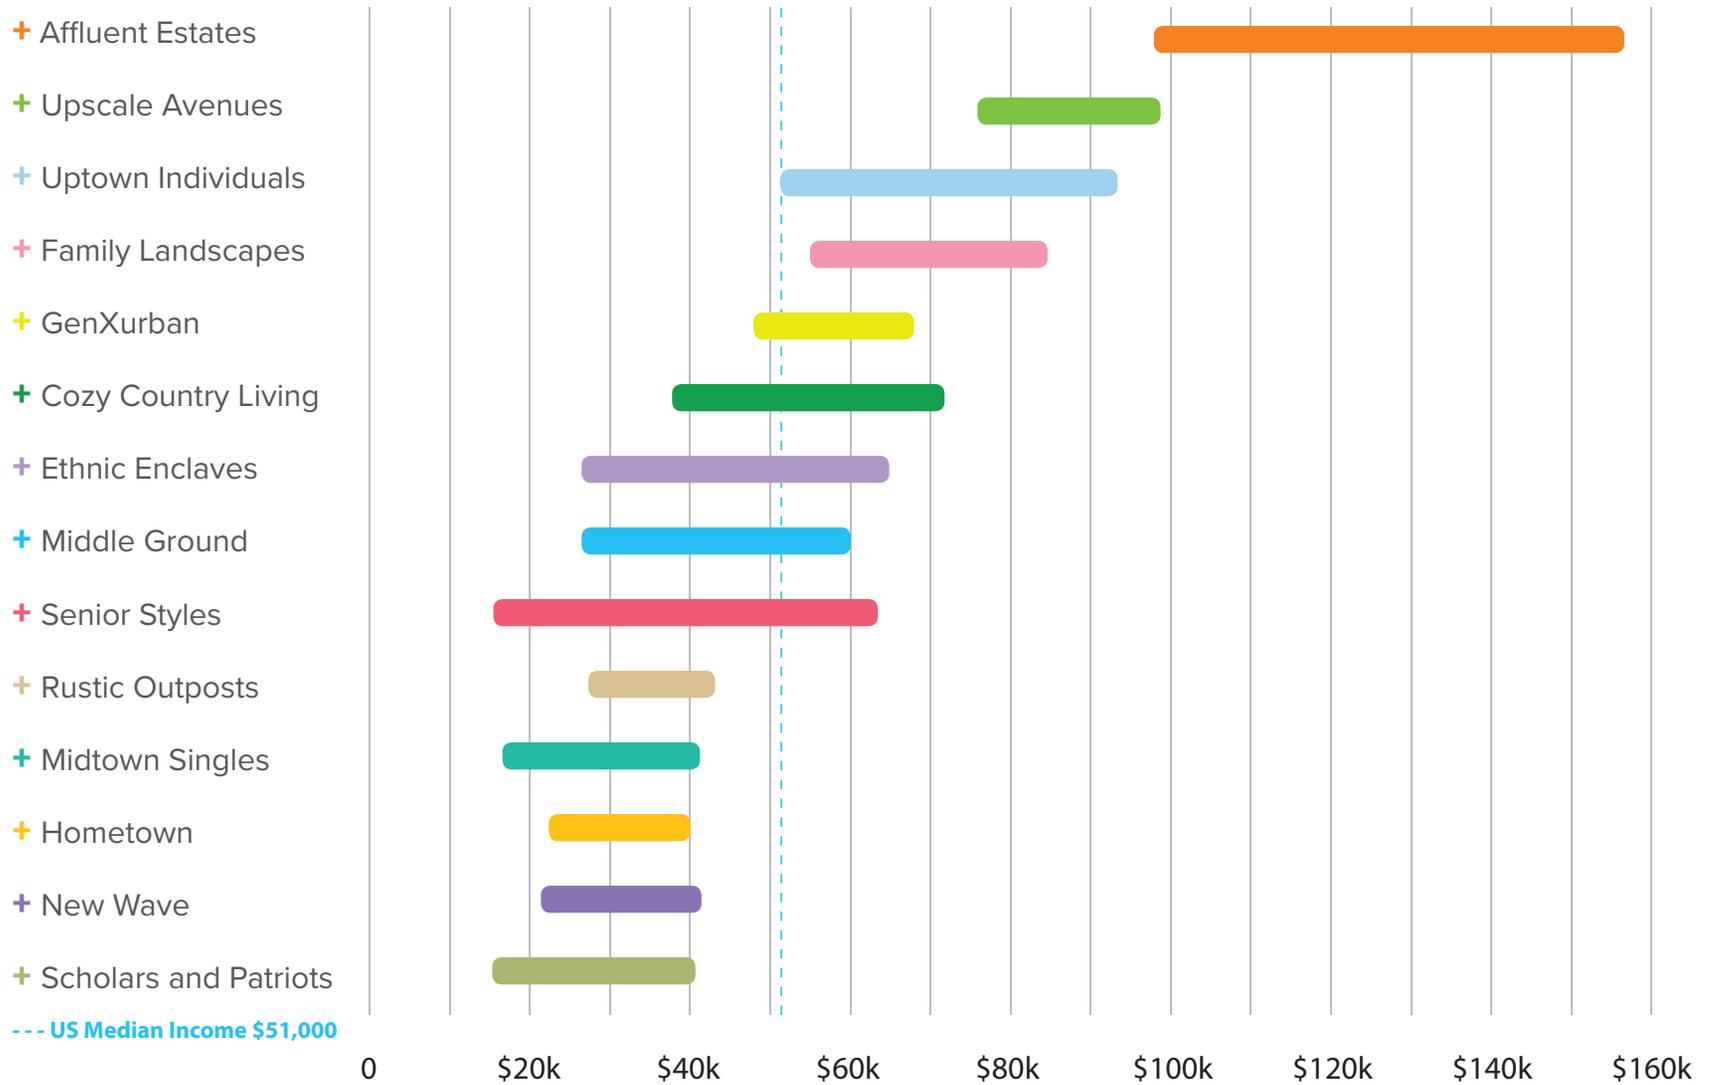

All companies, agencies, and organizations need to understand consumers/constituents in order to supply them with the right products and services and to reach them via their preferred media. These applications require a robust segmentation system that can accurately profile these diverse markets. The versatility and predictive power of Tapestry Segmentation allow users to integrate their own data or national consumer surveys into Tapestry Segmentation to identify their best market segments and reach them through the most effective channels.

+ TAPESTRY SEGMENTATION SUMMARY GROUPS

Esri’s Tapestry Segmentation provides a robust, powerful portrait of the 67 US consumer markets. To provide a broader view of these 67 segments, Esri combined them into 14 LifeMode Summary Groups based on lifestyle and lifestage composition.
